

Scenario: Care Plan

In WISPR's training environment (UAT):

1. Using what you already know about Cheryl create a care plan. Be sure to list any education topics and referrals that you would have discussed. Create goals for breastfeeding and follow up care. Finally write the plan that you would imagine would follow this conversation. Save the care plan and you are ready to certify this participant.
2. Using what you have learned about Molly and her family create care plans specific to each individual. There are radio buttons at the bottom of the care plan. They will allow you to copy things to other participants in the family if the information pertains to that participant as well. Save the care plan and you are ready to certify this family.

Scenario: Certification

1. Cheryl is ready to be certified. Please certify her using the Certification QRC that matches her category.
2. Molly and her family are ready to be certified. Please certify them using the Certification QRC that matches their category.
