Notes

- Incidence and mortality rates are per 100,000 and age-adjusted to the 2000 US Standard Population (19 age groups Census P25-1130) standard.
- U.S. incidence rates are White only because data are more comparable to the population demographics of Idaho than the U.S. All Races data.
- Screening rates for breast, cervical and colorectal cancers are measured through the Behavioral Risk Factor Surveillance System (BRFSS). Each specific measure is defined below.
- Idaho goals are set by the Comprehensive Cancer Alliance of Idaho (CCAI).
- Survival estimates are based on crude survival and include both cancer as well as other competing causes of death.

Breast Cancer

- BRFSS breast cancer screening measure is defined as percent of females aged 50-74 who had a mammogram in the past two years.
- BRFSS data are age-adjusted to 2000 US Standard Population age groups, 50-64 and 65-74.

- Screening recommendations vary. The U.S. Preventive Services Task Force recommendation summary and supplemental information can be found here:
 http://www.uspreventiveservicestaskforce.org/Page/Document/UpdateSummaryFinal/breast-cancer-screening1?ds=1&s=breast%20cancer
- Late stage incidence is included because the CCAI goal is specific to that measure.

Cervical Cancer

- Idaho ranks 51st because all states and the District of Columbia are included.
- Public Health District data are not available for mortality due to a small population size.
- BRFSS cervical cancer screening measure is defined as percent of females aged 21-65 who had a
 pap test in the past three years.
- BRFSS data are age-adjusted to 2000 US Standard Population age groups 21-34, 35-44, and 45-65.
- The U.S. Preventive Services Task Force screening recommendation summary and supplemental information can be found here:
 http://www.uspreventiveservicestaskforce.org/Page/Document/UpdateSummaryFinal/cervical-cancer-screening

Colorectal Cancer

- BRFSS colorectal cancer screening measure is defined as percentage of adults aged 50-75 who
 received a blood stool test in the past year, sigmoidoscopy in the past five years and blood stool
 test in the past three years, or a colonoscopy in the past 10 years.
- BRFSS data are age-adjusted to 2000 US Standard Population age groups, 50-64 and 65-75.
- Screening recommendation and screening options by the U.S. Preventive Services Task Force were updated in June 2016. Recommendation summary and supplemental information can be found here:
