INDUCED ABORTION SUMMARY REPORT

Purpose

The reporting of induced abortions occurring in Idaho has been required by state statute since July 1, 1977, as provided in Section 39-261, Idaho Code. The Bureau of Vital Records and Health Statistics began collecting abortion data in July 1977, with 1978 the first full year for which abortion statistics are available. This summary report contains data regarding abortions occurring in Idaho, regardless of residence, and data regarding abortions to Idaho residents, regardless of state of procedure, for the years 2004 – 2014.

Data Sources

Idaho data are from Idaho induced termination records and out-of-state abortion records for Idahoans who have a procedure out of state. Numbers of abortions, rates, and ratios are from the Idaho Bureau of Vital Records and Health Statistics, Division of Public Health, Idaho Department of Health and Welfare. For more information, please contact the bureau at (208) 334-6658.

INDUCED ABORTIONS OCCURRING IN IDAHO

Definition	Induced abortions occurring in Idaho include: <ol style="list-style-type: none">1) The number of reported abortions occurring in Idaho to Idaho residents; and,2) The number of reported abortions occurring in Idaho to non-residents.
Limitations	Due to revisions in the database, data may differ slightly from those previously published by the Bureau of Vital Records and Health Statistics. The reader is cautioned that the database contains small numbers; therefore, percentages, rates, and trends tend to randomly fluctuate.
Summary	<p>From 2004 to 2014, the number of induced abortions occurring in Idaho increased 40.5 percent from 963 in 2004 to 1,353 in 2014. During the time period, there were a total of 15,020 abortions in Idaho. The majority occurred in Ada County (13,600, 91.7 percent) and Twin Falls County (1,211, 8.2 percent).</p> <p>In the past year, induced abortions occurring in Idaho decreased 1.6 percent from 1,375 in 2013 to 1,353 in 2014. In 2014, induced abortion procedures occurred in Ada County (1,090), Twin Falls County (263), and one in Valley County. Ada County reported a 1.4 percent decrease of abortions from 2013 to 2014. The number in Twin Falls County decreased 1.5 percent from 267 in 2013 to 263 in 2014.</p>
Age	From 2013 to 2014, the number of abortions decreased in nearly all age groups except for 18-19 year olds which increased 6.3 percent, and 30-39 year olds which increased 13.6 percent. Among teens, the number of abortions as a whole increased 1.2 percent (teens aged 15-19); this age group accounted for 12.9 percent of the abortions in Idaho in 2014. The number of abortions to women aged 20-24 accounted for the highest percentage of abortions in 2014 (34.1 percent) with 462 abortions, followed by women aged 25-29 with 25.1 percent (339 abortions).
Residency Status	Idaho residents accounted for 94.8 percent of abortions occurring in Idaho and non-residents accounted for 5.2 percent in 2014. The number of abortions occurring in Idaho to Idaho residents decreased 2.9 percent in 2014, from 1,321 in 2013 to 1,283 in 2014. The number of abortions occurring to non-Idaho residents increased 29.6 percent from 54 in 2013 to 70 in 2014.
Marital Status	The number of abortions occurring to married women decreased less than one percent in 2014, from 225 in 2013 to 223 in 2014. The number of abortions occurring to unmarried women decreased 3.5 percent in 2014, from 1,143 in 2013 to 1,103 in 2014.
Race	There was a decrease in the number of abortions occurring to American Indians (31.8 percent) and females of other race, which includes more than one race (34.6 percent) from 2013 to 2014. The number of abortions increased among Blacks (10.0 percent) and Asian/Pacific Islanders (7.9 percent). White females made up the majority of the abortions occurring in Idaho (88.9 percent), followed by Race not stated (5.8 percent), Other race (4.0 percent), Asian/Pacific Islanders (3.2 percent), Blacks (1.7 percent) and American Indian (1.2 percent).
Ethnicity	The number of abortions occurring to Hispanics increased 3.5 percent in 2014, from 202 in 2013 to 209 in 2014. At the same time, the number of abortions occurring to non-Hispanics decreased 2.5 percent, from 1,135 in 2013 to 1,107 in 2014. The number of abortions to Hispanic women accounted for 15.4 percent of the abortions in Idaho in 2012, 15.1 percent in 2013, and 15.9 percent in 2014.

1. The clinical estimated length of gestation may differ from length of gestation based on the date of last normal menses and date of pregnancy termination. Data based on weeks of gestation differ from data based on weeks postfertilization (not shown). The postfertilization age is the age as calculated from the fertilization of the human ovum. Fertilization of the human ovum occurs approximately two weeks after the onset of menses. Therefore, the clinical estimated length of gestation is approximately two weeks longer than the number of weeks postfertilization. Abortion data published in this table are based on the clinical estimated length of gestation, and are not comparable with data based on postfertilization.

2. The primary procedure that terminated the pregnancy is shown; there may be additional procedures used for the termination.

Dash (-) represents zero.

NA - not applicable

Note: prior to July 1, 2006, any educational material may have been provided to patient. Starting July 1, 2006, educational materials from the Idaho Department of Health and Welfare must be provided to patient by law. Of the nine records with unknown status for patient education materials provided in 2006, 7 procedures occurred prior to July 1, 2006 and 2 occurred on or after July 1, 2006. The one procedure in 2006 in which patient educational materials were not provided occurred prior to July 1, 2006. It is possible to have reports of procedures with unknown or no patient educational materials provided in rare cases of medical emergencies.

INDUCED ABORTIONS TO IDAHO RESIDENTS

Definition

Induced abortions to Idaho residents include:

- 1) The number of reported abortions occurring in Idaho to Idaho residents; and,
- 2) The number of reported abortions occurring in other states to Idaho residents.

Limitations

In 1984, an interstate data exchange program for abortion data was initiated nationwide, whereby Idaho can obtain non-identifying information about abortions occurring to Idaho residents in other states.

Beginning in 2014, out of state records with missing City and County are allocated to the largest city nearest the state in which the procedure occurred. In 2014, there were 22 records from Washington with missing City and County and these were allocated to Coeur D'Alene, Kootenai County.

The reader is cautioned that the database contains small numbers; therefore, percentages, rates, and trends tend to randomly fluctuate.

Summary

From 2004 to 2014, the number of abortions to Idaho residents ranged from a low of 1,618 in 2004 to a high of 2,348 in 2009. There were a total of 21,593 abortions to Idaho residents in the 11 year period from 2004 to 2014, for an average of 1,963 abortions per year. The majority of abortions to Idaho residents occurred in Idaho. From 2004 to 2014, 14,410 abortions to residents occurred in Idaho (66.7 percent). Of the 7,183 abortions to Idaho residents which occurred out of state from 2004 to 2014, 5,031 occurred in Washington (70.0 percent of out-of-state abortions). A total of 1,399 abortions occurred in Utah (19.5 percent), 377 in Montana (5.2 percent), and 362 in Oregon (5.0 percent).

Overall, the number of abortions to Idaho residents increased by 133 (8.2 percent) from 1,618 in 2004 to 1,751 in 2014. The abortion rate per 1,000 females aged 15-44 remained relatively unchanged from 5.5 in 2004 to 5.6 abortions per 1,000 females in 2014. The abortion ratio per 1,000 live births increased 6.5 percent from 71.8 per 1,000 live births in 2004 to 76.5 per 1,000 live births in 2014.

From 2013 to 2014, the number of abortions to Idaho residents decreased by 43 (2.4 percent) from 1,794 in 2013 to 1,751 in 2014. Overall, the Idaho resident abortion rate decreased 3.4 percent from 5.8 per 1,000 females aged 15-44 in 2013 to 5.6 in 2014. The abortion ratio per 1,000 live births decreased 4.7 percent from 80.3 abortions per 1,000 live births in 2013 to 76.5 abortions per 1,000 live births in 2014.

District of Residence

From 2013 to 2014, the number of abortions decreased for residents in Districts 3, 4, 6, and 7. District 6 had the highest decrease in the number of abortions to residents at 22.3 percent. The percent decrease in the number of abortions among District 3 residents was 12.8 percent, 5.9 percent among District 4, and 15.1 percent among District 7. The number of abortions increased among District 1 residents by 4.1 percent, 7.1 percent among District 2 residents and 13.8 percent among District 5 residents. The abortion rate (number of abortions per 1,000 females aged 15-44) ranged from a low of 1.8 among District 7 residents and a high of 7.4 among District 4 residents in 2014.

In Idaho

The number of induced abortions occurring to Idaho residents in Idaho decreased 2.9 percent in 2014, from 1,321 in 2013 to 1,283 in 2014.

Out-of-State

The number of induced abortions occurring to Idaho residents in another state decreased 1.1 percent, from 473 in 2013 to 468 in 2014. The majority of out-of-state abortions occurring to Idaho residents occurred in Washington in 2014 (76.1 percent), followed by Utah (16.9 percent), Montana (3.8 percent), and Oregon (3.0 percent).

Abortion rate: Number of induced abortions to women of all ages per 1,000 females 15-44 years of age.

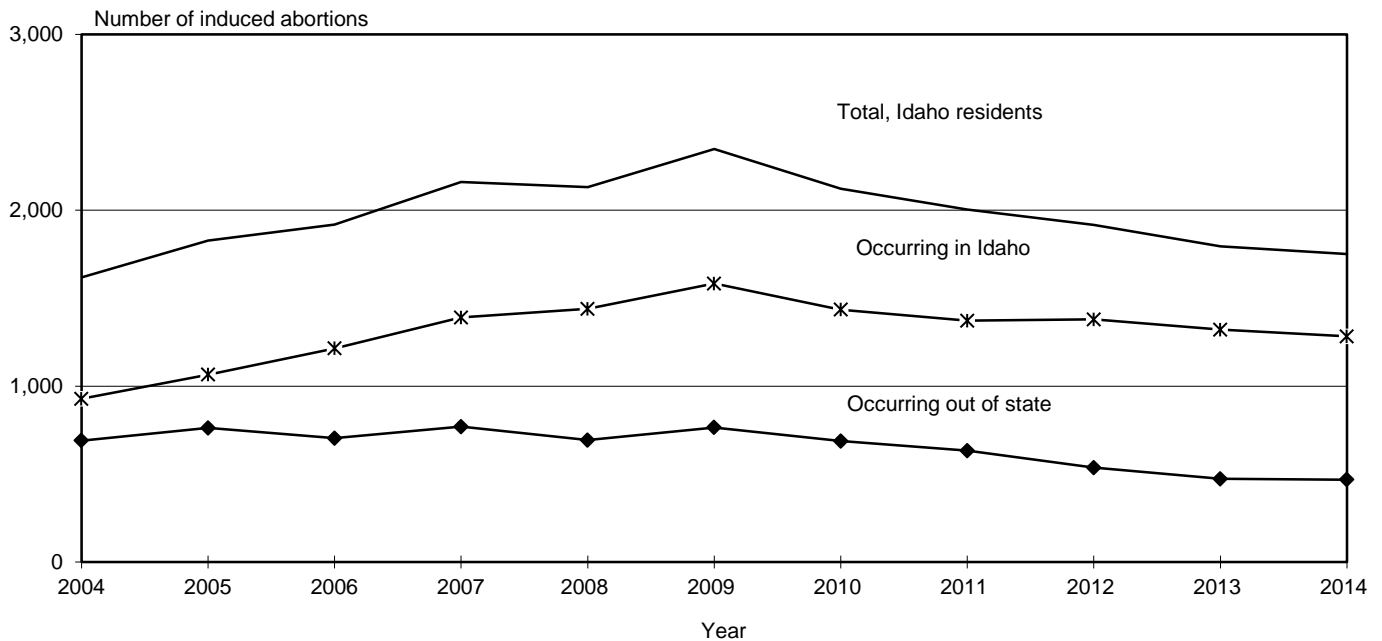

Dash (-) represents zero.

Some rates are based on small numbers (<20), and caution is advised when interpreting rates based on small numbers.

1. Total abortion rate: Number of induced abortions to women of all ages per 1,000 females 15-44 years of age.

Rates for 2004-2009, and 2011-2014 are based on July 1, 2004-July 1, 2014 population estimates from the U.S. Census Bureau and NCHS, Internet release dates September 9, 2005, August 16, 2006, August 16, 2007, September 5, 2008, September 2, 2009, July 23, 2010, July 20, 2012, June 13, 2013, June 26, 2014, and June 30, 2015.

Rates for April 1, 2010 are based on Census data, Internet released May 12, 2011.

2. Rate for 45+ age group is based on the population of women 45-49 years of age.

3. Total abortion ratio: Number of induced abortions per 1,000 live births.

* Abortion rate by age group for 2011 has been revised in this report.

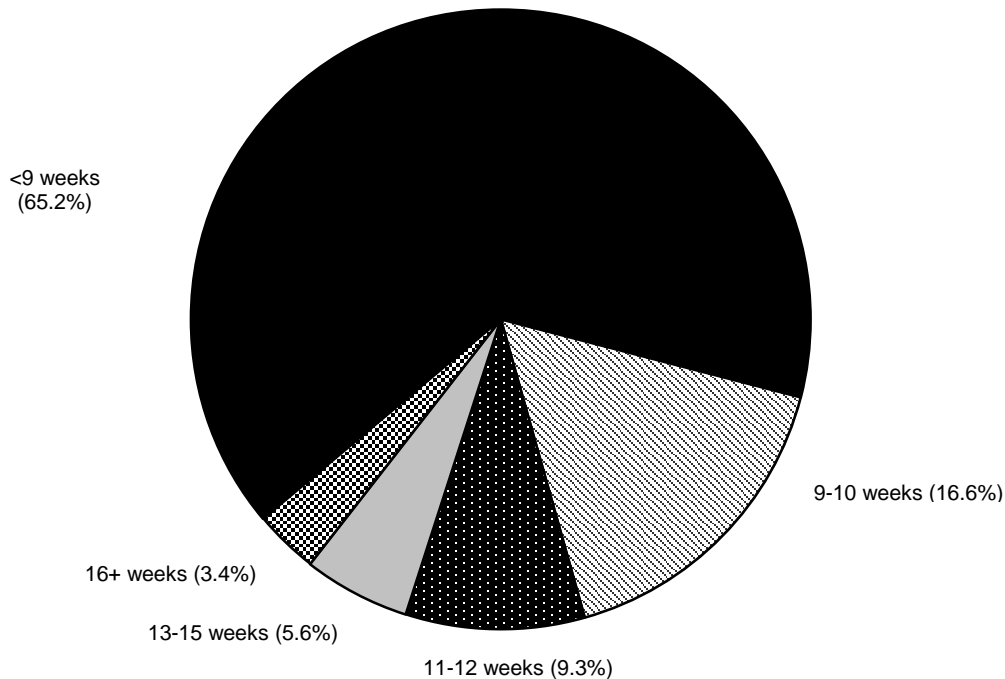

Dash (-) represents zero or a rate that rounds to less than 0.1.

NA - not applicable.

Table 13

Graph 10
INDUCED ABORTIONS TO IDAHO RESIDENTS
Clinical Estimated Length of Gestation
Three-Year Total, 2012-2014

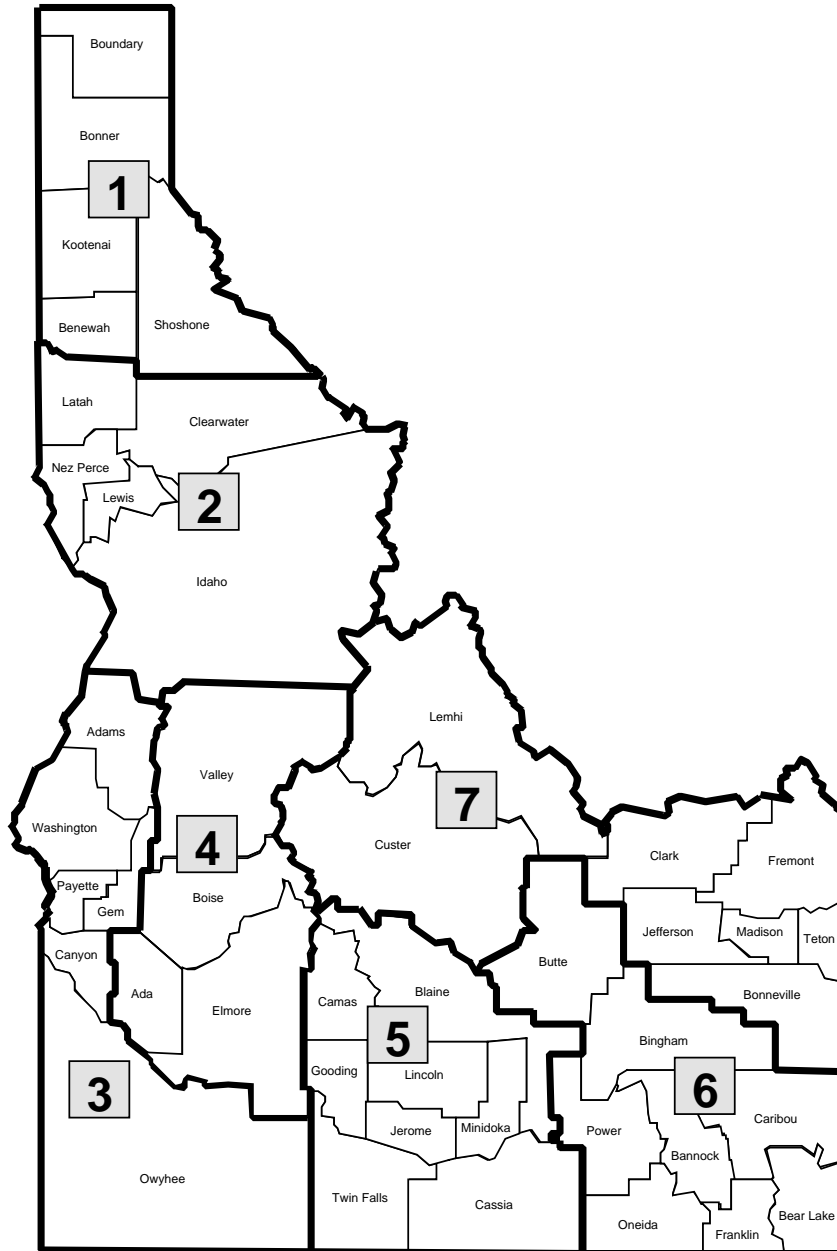

Percentages are based on records with known data for length of gestation.

*The clinical estimated length of gestation may differ from length of gestation based on the date of last normal menses and date of pregnancy termination. Data based on weeks of gestation differ from data based on weeks postfertilization, and are not comparable (see footnote table 3A for additional information). The primary procedure that terminated the pregnancy is shown; there may be additional procedures used for the termination.

Dash (-) represents zero.
