Evacuation of Health Care Facilities DVD

Major fires in health care facilities are rare, but can be deadly. Most patients cannot leave the fire area without assistance. This hard-hitting video follows the recommendations in *NFPA 99* and *NFPA 101*® to train your staff on:

- Use of the manual fire alarm pull station
- When to use a fire extinguisher
- Horizontal and vertical evacuation
- Oxygen shutoff
- Smoke compartments
- Smoke barrier doors

Ideal for all physicians, nurses, volunteers, administrators, facilities and environmental departments, and others working in a patient care environment. Show this video and save lives! (16 min.)

This DVD may be reserved by facilities within Idaho (maximum two weeks) to conduct training, and must be returned postage paid.

To request the DVD contact FSB@dhw.idaho.gov or call (208) 334-6626
