

Scenario: Breastfeeding Dyad

Complete the following scenarios in WISPr training environment (UAT):

In previous scenarios you created a family for Cheryl a pregnant woman. Cheryl has now had a baby boy and named him Josiah. Josiah was born on the 1st of last month and is currently breastfeeding (not using any formula). Create a profile for Josiah and attach him to the family that you created for Cheryl. With these scenarios you should be able to navigate the WISPr categories for women.

1. Cheryl will need to be refreshed as a breastfeeding mother of an infant (B). A new assessment and care plan should be completed at this time. You can now enter the Actual Delivery Date. Certify Cheryl and Josiah. Cheryl discusses going back to work and asks about a breast pump. Cheryl would qualify for a pump and you arrange for the Registered Dietitian to issue her a single-user electric breast pump following your appointment with her. Next find out what food and milk options are available for a breastfeeding woman. Choose a package and follow your instructor's guidance on how to print the checks.
2. Josiah is now breastfeeding 75% of the time. Navigate WISPr to create appropriate food packages for Josiah and Cheryl.
3. Cheryl is no longer breastfeeding Josiah. Refresh Cheryl appropriately. Navigate WISPr to create appropriate food packages for Josiah and Cheryl. When Josiah turns six months old what packages will be available for Cheryl?
4. What food package would Cheryl be able to get when Josiah turned eight months old if she continued to breastfeed Josiah until he was 11 months old? What package (if any) would Josiah be able to get?
