

# HEART DISEASE DEATHS IDAHO RESIDENTS 2009-2011

“Diseases of heart” is a category used to rank leading causes of death.<sup>1</sup> It is more commonly known as heart disease. Idaho resident heart disease death rates were consistently lower than U.S. rates from 1999-2010<sup>2</sup> (latest U.S. data available). Both saw a downward trend until 2008, when Idaho rates leveled off. From 2009-2011 there were 7,389 Idaho resident heart disease deaths.

## Idaho Quick Facts

### Heart Disease Deaths

Number of Idaho resident deaths per year:

2009:	2,392
2010:	2,478
2011:	2,519

Idaho resident mean age death:

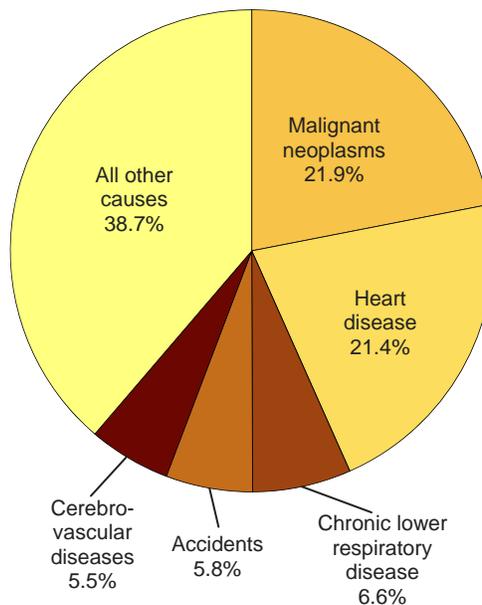

Total:	77.9
Male:	74.7
Female:	82.0

Rank for leading cause of death:  
2nd

2009-2011 age-adjusted rate:  
155.9 per 100,000

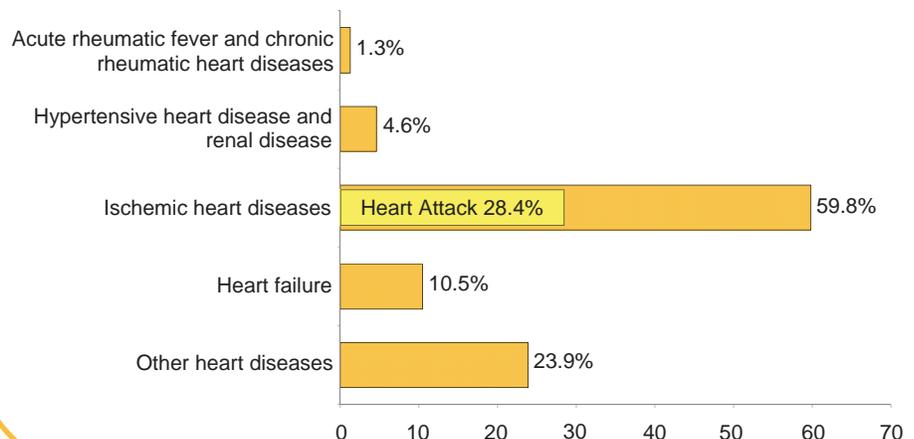

Heart disease can be divided into five specific classifications, the most common of which is Ischemic heart disease. Ischemic heart disease includes acute myocardial infarction (heart attack), as well as angina pectoris, other acute ischemic heart diseases, and chronic ischemic heart disease. From 2009-2011, there were 2,101 heart attack deaths, which accounted for 47.5 percent of all Ischemic heart disease deaths and 28.4 percent of all heart disease deaths during that period.

**Idaho Resident Deaths  
Percentage of Deaths by Leading Cause of Death  
Three-Year Aggregate: 2009-2011**

Heart disease was the second leading cause of death among Idaho residents from 2009-2011, second only to Malignant neoplasms, more commonly known as cancer. Heart disease was the leading cause of death in the U.S. in 2010<sup>3</sup> with an age-adjusted rate of 179.1 per 100,000 population.<sup>4</sup> Idaho’s 2009-2011 age-adjusted rate was 155.9 per 100,000 population. In Idaho, the male age-adjusted rate was 65.8 percent greater than the female rate, with the male rate at 198.8 per 100,000 males and the female rate at 119.9 per 100,000 females. There were 4,080 male heart disease deaths and 3,309 female heart disease deaths
