RULE DESCRIPTION

AMBULATORY CARE EMERG DEPT VISITS AGE < 1 YR {MS} and AMBULATORY CARE EMERG DEPT VISITS AGE 1 to 9 {MS} and AMBULATORY CARE EMERG DEPT VISITS AGE 10 to 19 {MS} identify the number of emergency department (ED) visits per 1,000 member months among children in the age groups of less than one year, age 1 to 9 years, and age 10 to 19 years. \([\text{ED visit rate} = (\text{number of ED visits} / \text{number of eligible months}) \times 1,000]\) This subset is based on the CMS Core Set of Children’s Health Care Quality Measures for Medicaid, Measure AMB-CH, and HEDIS measure Ambulatory Care (AMB).

PROPRIETARY STATUS: This measure is owned by NCQA.

DEVIATIONS from Medicaid criteria:

1. The criteria specifies to report all services the state paid for or expects to pay for (i.e., claims incurred but not paid). Results are based on paid claims only.
2. The criteria states to determine enrollee months using a specified day of each month (e.g., the 15th or the last day of the month), to be determined by the state’s administrative processes. A month of eligibility is counted if the member is eligible for medical coverage anytime during the month.
3. The criteria specifies to use the enrollee’s age on a specified day of each month to determine to which age group the enrollee months will be contributed, and also to report the ED visit in the appropriate age group as of the date of service. Age is determined at the time the claim was incurred.
4. For the Medicaid population, states are to run enrollment reports for enrollee month calculations to determine utilization rates within 30 days of the claims reports and for the same time period. States may include retroactive additions and terminations in these reports.
